Wood Floor Cleaning – Leaflet 1

By following the advice on this leaflet your floor will remain protected for a long time to come. Never wash the floor with water only: it will not efficiently clean the surface of the floor and, moreover, the minerals contained in water may leave behind a residue that could affect its appearance.

For daily maintenance remove the dust from the floor using a vacuum cleaner equipped with a brush suitable for hardwood floors.

Have a separate - *Exclusive* - mop for your wood floor.

Don't use a steamer on wood floors.

Clean the floor regularly in order to remove grease, dirt and dust from it. Spills should be wiped clean immediately.

After a long period of time a *darkening effect can appear in the* deeper grain of the wood mostly on the brushed part (even more in lighter woods) due to accumulation of dust. Regular maintenance of the floor will reduce this appearance.

Use a mild detergent especially made for cleaning wood floors .

Directions for use

Follow the quantities specified on the product.

Mop the surface with this solution, ensuring that the mop is only damp and never wet. *Use a cloth/mop that will not leave fiber residues.*

Let the surface dry before walking on the floor. No need to rinse.

In case of tough dirt wash the floor with a stronger dose. Never exceed this concentration.

Make a note of your floor finish here:

Oil and Wax Finish

Recommended Products: Green (LG), Saicos Clean & Care for Oil floors.

Lacquered/Varnished

Recommended Products: Green (LG), BOEN Clean & Care for Lacquered floors.
